-!- CATALVTIC ACTIVITY: PYROPHOSPHATE + H(2)O = 2 ORTHOPHOSPHATE.

-!- COPACTOR: REQUIRES MANGANESE FOR ITS ACTIVITY.

-!- SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

-!- SIMILARITY: BELONGS TO THE PPASE CLASS C FAMILY.
                                                                                                                                                                                                                      ;

Aldose 1-epimerase (EC 5.1.3.3) - pig (fragment)
NiAlternate names: mutarotase
Cispecies: sus scrofa domestic pig)
Cibate: 03-Feb-1994 as scrofa domestic pig)
Cibate: 03-Feb-1994 sequence_revision 03-Feb-1994 stext_change 07-May-1999
CiAccession: PU0033
Final Association of Name of Nam
Ig heavy chain DJ region (clone C68-105) - human (fragment)
C; Species: Homo sapiens (man)
C; Date: 30-Sep-1993 #sequence_revision 30-Sep-1993 #text_change 07-May-1999
C; Accession: PH1312

peptidylprolyl isomerase (EC 5.2.1.8) FKBP51 - human (fragment)
N.Alternate names: FK506-binding protein FKBP51; peptidylprolyl cis-trans isomerase FC; Specias: Homo sapiens (man)
C.Specias: Homo sapiens (man)
C.Date: 30-Apr-1993 #sequence_revision 18-Nov-1994 #text_change 16-Feb-1997
C.Accession: B45115

Sequence 27, Application US/08466680B
Patent No. 6075122
GENERAL INFORMATION:
APPLICANT: Cheever, Martin A.
APPLICANT: Cheever, Mary L.
TITLE OF INVENTION: IMMUNE REACTIVITY TO HER-2/new PROTEIN
TITLE OF INVENTION: FOR DIAGNOSIS AND TREATMENT OF MALIGNANCIES IN WHICH THE
TITLE OF INVENTION: HER-2/new ONCOGENE IS ASSOCIATED
NUMBER OF SEQUENCES: 69
CORRESPONDENCE ADDRESS:
ADDRESSEE: Seed and Berry LLP
STREET: 6300 Columbia Center, 701 Fifth Avenue
                                                               APPLICATE: Soo Hoo, William
TITLE OF INVENTION: MEMBRANE-BOUND CYTOKINE COMPOSITIONS
TITLE OF INVENTION: COMPRISING GM-CSF AND METHODS OF MODULATING AN IMMUNE
TITLE OF INVENTION: RESPONSE USING SAME
NUMBER OF SEQUENCES: 50
CORRESPONDECE ADDRESS:
ADDRESSEE: CAMPBELL & FLORES, LLP
STREET: 4370 La Jolla Village Drive, Suite 700
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match 100.0%; Score 43; DB 2; Length 9; Best Local Similarity 100.0%; Pred. APPLICANT: Cheever, Martin A.
TITLE OF INVENTION: IMMUNE REACTIVITY TO HER-2/neu PROTEIN
TITLE OF INVENTION: FOR DIAGNOSIS AND TREATMENT OF MALIGNANCIES IN WHICH THE
TITLE OF INVENTION: HER-2/neu ONCOGENE IS ASSOCIATED
NUMBER OF SEQUENCES: 69
CORRESPONDENCE ADDRESS:
ADDRESSEE: Seed and Berry LLP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Patent No. 5801005
GENERAL INFORMATION:
APPLICANT: Cheever, Martin A.
APPLICANT: Disis, Mary L.
TITLE OF INVENTION: FOR DIAGNOSIS AND TREATMENT OF MALIGNANCIES IN WHICH THE TITLE OF INVENTION: HER-2/neu ONCOGENE IS ASSOCIATED
TITLE OF INVENTION: HER-2/neu ONCOGENE IS ASSOCIATED
                                                                                                                                                                                                                                                                             APPLICANT: Cheever, Martin A.

GENERAL INFORMATION:
APPLICANT: Cheever, Martin A.
APPLICANT: Disis, Mary L.
TITLE OF INVENTION: IMMUNE REACTIVITY TO HER-2/NEU PROTEIN
TITLE OF INVENTION: HER-2/NEU ONCOGENE IS ASSOCIATED
NUMBER OF SEQUENCES: 68
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 4.2, Application US/08414417B

Patent No. 5801005

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: IMMUNE REACTIVITY TO HER-2/new PROTEIN

TITLE OF INVENTION: FOR DIAGNOSIS AND TREATMENT OF MALIGNANCIES IN WHICH THE TITLE OF INVENTION: HER-2/new ONCOGENE IS ASSOCIATED
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 24; DB 1; Length 15;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antigen fragment 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Description

                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                             R73685-876 are potential peptide binders of HLA-A2.1 motif. Using motifs disclosed in the invention, these peptides were screened for further motifs. Only peptides with binding affinity of at least 1% (binding affinity is expressed as an IC50 value) as compared to the standard peptide (R71293) in assays. This peptide has an binding value of 0.1500. The peptides of the invention can induce cytocoxic T lymphocytes which can react with target cells. They can be used for the treatment or prophlyaxis of cancer, eg. prostate cancer or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      R97507 is a peptide capable of activating cytotoxic T lymphocytes (CTLs) which specifically target malignant cells. The peptide corresponds to amino acids 369-377 of human Her-Z/Neu protein. CTL-activating peptides can be used in a vaccine for protecting against tumour cell formation. CTLs activated by the peptides will lyse tumour cells displaying specific peptides. Antibodies against CTL-activating peptides are useful for the identification of other

Synthetic peptides W36824-40 are based on the sequence of the human Her-2/neu protein, wherein each sequence contains the anchor motif for human leukocyte antigen (HLA) A2.1. The present peptide is based on positions 369-377. The ability of these peptides to inhibit the binding of an influenza virus matrix protein peptide MI to HLA A2.1 was measured by inhibition of lysis by an MI specific, HLA A2.1 restricted, cytotoxic T lymphocyte (CTL) clone. The present protein showed 38% inhibition. The peptides were also tested for their ability to elicit an immune response in vivo. However, only H3 (W36824) and H7 (W36826) were able to do this. H3 and H7 peptides are tumour-associated antigens, and were used to immunize a transgenic, non-human vertebrate (that has been modified to express at least one HLA antigen), so that the ailmal produces CTL which displays HLA-restricted T-cell receptor (TCR) specificity for the alpha and beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             chains of such TCRs can be amplified from CTLs produced in the above manner. Cells expressing recombinant TCR are used to identify antigens associated with a tumour and to treat tumours in humans. Transgenic mice are a more convenient source of CTL than the tumour-infiltrating lymphocytes previously used. TCR can be humanised to reduce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Her-2/neu protein; human leukocyte antigen A2.1; HLA; cytotoxic T lymphocyte; CTL; Immune response; tumour-associated antigen; T-cell receptor; TCR; tumour treatment.
similar compounds which may be useful for treating cancer or virally-infected cells, or for diagnosis. The peptide and vaccines produced provide immunity to a high percentage of different ethnic groups, i.e. those with different HIA alleles.
                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acid encoding variable regions of HLA-restricted non-human \tau cell receptor specific for tumour antigen - used to identify tumour antigens and for tumour therapy
                                                                                                                                                                                                                                                                                                                                                                                                                            .;

These peptides are are cysteinedepleted mutants of a native disease-specific CTL epitope. The cysteinedepleted CTL epitopes elicit a stronger or more specific CTL response than the native epitope. The epitopes can be used in a disease-specific Tmmunogen to protect a mammal against disease in particular melanomas. The peptides may also be used to screen a sample for the presence of an antigen with the same epitope, or with a different cross-reactive
side-reactions and short peptide derivatives of TCR are more economical to produce than TCR itself, particularly when expressed as a single-chain molecule rather than as a dimer.

A microparticle preparation (MP) has been developed, consisting of microparticles having a diameter of less than 100 mu m. The MP comprises:

(a) a polymeric matrix (PM) consisting of one or more synthetic polymers having a solubility in water of less that 1 mg/1; and (b) an expression vector selected from RNA molecules (at least 50% of which are closed circles) or circular plasmid DNA (at least 50% of which are supercoiled). Also described is a MP of at most 20 microns in diameter, comprising: (a) comprising an expression control sequence operatively linked to a coding sequence, where the coding sequence encodes an expression product selected from: (1) a polypeptide at least 7 amino caids in length, having a sequence identical to the sequence of: (1) a fragment of a naturally-occurring mammalian protein: or (ii) a fragment of a maturally-occurring alength and sequence which permits it to command to an MHC class I or II molecule; and (3) the polypeptide or the peptide linked to a trafficking sequence. W69763 to W69765, and W78793 companies of the present invention. The CMPs are highly effective vehicles for the present invention. The CMPs are highly effective vehicles for the present invention. The CMPs are highly effective vehicles for the delivery of polynocleotides interming genetic diseases, infections or tumours or for downregulating

```
The present invention describes a method of inducing and/or sustaining an immunological cytotoxic T lymphocyte (CTL) response in a mammal. The method comprises: (a) delivering an antigen to the mammal at a level to induce an immunological CTL response in the mammal; and (b) maintaining the level of the antigen in the mammal's lymphatic system to maintain the immunological CTL response. The method can be used for the delivery of e.g. a differentiation antigen, a tumour-specific multilineage antigen, an embryonic antigen, an oncogene antigen, a mutated tumour-suppressor gene antigen, or a viral antigen. They can be used for the treatment of disease such as cancer, e.g. malignant melanoma or infectious disease, e.g. viral disease such as hepatitis or AIDS. Sustained antigen delivery to the lymphatic system provides for potent CTL stimulation that takes that is necessary to keep CTL active, cytotoxic and recirculating through the body. Y10071 to Y10639 represent examples of peptide antigens given in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Inducing a cytotoxic T lymphocyte response - by maintaining a level of antigen in the lymphatic system of a mammal so as to provide a sustained CTL response, used to treat, e.g. AIDS
                                                                                                                                                                                               Cytotoxic T-lymphocyte response, CTL; antigen; lymphatic system; immunisation; tumour; infectious disease; immunotherapy; cancer; malignant melanoma; viral disease; hepatitis; AIDS.
                                                                                                                                                   HLA Class I motif peptide SEQ ID NO:425.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequences shown in W70053 to W70075 represent peptides derived from tER-2/neu (cerB-2) antigen. The peptides can bind to a human leukocyte antigen (HLA). HLA-A2.1 and are used to exemplify the method of invention of producing antigen-specific cytotoxic T cells (CTLS) in control invention of producing antigen-specific cytotoxic T cells (CTLS) in control invention of producing antigen-specific CTLS (APCS) pretreated with antigen presenting cells (APCS) pretreated with complex (MHC) molecules with antigen presenting cells (APCS) pretreated with purified CDB cells in the presence of at least 2 incubation growth factors, thereby producing antigen-specific CTLS. A method for specifically killing carget cells in a human patient is also provided which comprises comparise class I MHC molecules. The pretreated APCS are incubated with the cytotoxic growth factors, thereby producing activated CTLS which are contacted with a carrier to form a composition. The composition can then be administered to the patient. The activated CTLS composition can then be administered to the patient. The activated CTLS contacting cancers, immune disorders, viral infections, contactions, contactions of the contaction in the contact of the patient. The activated CTLS contaction is a composition or contacting cancers, immune disorders, viral infections, contactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ruben SM,
                                                                                                                                                                                                                                therapy.
     The present invention relates to a new pharmaceutical composition comprising a unit dose form of a peptide, or analogue, comprising an epitide or peptides y 19812-198319 which are derived from warious antigens for various human leucocyte antigen class DR molecules, representative of the world wide population. The class DR molecules, representative of the world wide population. The class DR molecules, representative of the world wide population. The created than or equal to 1,000 nM. The pharmaceutical focuses the immune response than or equal to 1,000 nM. The pharmaceutical focuses the immune response covariants selected determinants and could therefore be used in cases of chronic viral diseases and cancer. Examples of diseases that can be treated using the peptide containing pharmaceutical include autoimmune control or architical and food at passes of rheumatoid arthritis, multiple sclerosis, and mysathenia gravis), allograft rejection, allergies, lyme disease, hepatitis, or solver interpretation of the peptides of glomerulonephritis and food foot streptococcal endocarditis or glomerulonephritis and food hypersensitivities. The peptide epitopes can be used to enhance immune responses against other immunogens administered with the peptides.

Classases which can be treated using immunogenic mixtures include prostate cancer, hepatitis B, hepatitis C, AIDS, renal carcinoma, cervical carcinoma, lymphoma, and condyloma acuminatum. The peptides may also be useful as diagnostic creagents, for example, to determine the susceptibility of an individuals will be at substantial risk of developing chronic infection. The selection of appropriater T and B cell epitopes should allow the cell epitopes of pathogens which are characterized by high sequence epitopes of pathogens which are characterized by high sequence.
                                                Immune response; chronic viral disease; cancer; autoimmune disease; rheumatoid arthritis; multiple sclerosis; myasthenia gravis; AIDS; allograft rejection; allergy; lyme disease; hepatitis; prostate cancer; glomerulonephritis; food hypersensitivity; malaria.

Y86215 to Y86333 are the secreted proteins encoded by the 94 human genes.
This sequence represents a fragment of one of the human secreted
This sequence represents a fragment of one of the human secreted
proteins. The genes and their corresponding secreted polypeptides are
useful for preventing, treating or ameliorating medical conditions,
e.g., by protein or gene therapy. Also pathological conditions on
diagnosed by determining the amount of the new polypeptides in a sample
or by determining the presence of mutations in the new genes. Specific
uses are described for each of the 94 genes, based on which tissues they
are most highly expressed in, and include developmental abnormalities
and foctal deficiencies, blood disorders, diseases of the immune system,
autoimmune diseases, inflammation, allergies, Alzheimer's and cognitive
disorders, achizophrenia, arthritis, asthma, psoriasis, sepsis, skin
disorders, atherosclerosis, diabetes, cardlovascular disorders, kidney
clisorders, digestive/endocrine disorders, infections and AIDS. The
pollypeptides are also useful for identifying their binding partners.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The specification describes a method for identifying modulators of a sterol-regulated Site-1 protease. Site-1 protease cleaves sterol regulatory element binding proteins (SREBPS) in the endoplasmic reticulum, initiating release from membranes and activating lipid synthesis. The modulators therefore also modulate cholesterol and fatty acid biosynthesis! The method comprises selecting an agent capable of down regulating Site-1 protease and formulating a composition comprising the agent. The site-1 protease inhibitors are useful for treating a patient for elevated serum cholesterol. Discasses treated include hypercholesterolemia and other lipid metabolism associated conditions. The present sequence was used in the course of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel assay for identifying modulators of sterol-regulated Site-1 protease useful for the treatment of hypercholesterolemia, involves identifying an agent capable of down regulating Site-1 protease activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes peptides that selectively home to a tissue or organ. The peptides can be used for identifying an organ or tissue, for identifying a target molecule expressed by an organ or tissue or for treating an organ or tissue pathology, where the organ or tissue is selected from prostate, lung, skin, retina, pancreas, gut, ovary, adrenal gland, liver, and lymph node. The peptide bind to the membrane dipeptidase (MDP). V48618 to V49066 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New peptides which selectively home to organs or tissues, used for, e.g. identifying target ligands and for therapy of pathological

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The specification describes a method for identifying modulators of a sterol-regulated Site-1 protease. Site-1 protease cleaves sterol requiatory element binding proteins (SRBBPs) in the endoplasmic reticulum, initiating release from membranes and activating lipid synthesis. The modulators therefore also modulate cholesterol and fatty acid blosynthesis. The method comprises selecting an agent capable of down regulating Site-1 protease and formulating a composition comprising the agent. The site-1 protease inhibitors are useful for relating a patient for elevated serum cholesterol. Diseases treated include hypercholesterolemia and other lipid metabolism associated conditions. The present sequence is derived from site-1 protease, and is used in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel assay for identifying modulators of sterol-regulated Site-1 protease useful for the treatment of hypercholesterolemia, involves identifying an agent capable of down regulating Site-1 protease
                                                   Modulator; sterol-regulated Site-1 protease; cholesterol; sterol regulatory element binding protein; SREBP; lipid synthesis; fatty acid biosynthesis; site-1 protease; protease inhibitor; serum cholesterol; hypercholesterolemis; lipid metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .

Ubiquicidine or optionally modified peptide fragments of ubiquicidine, may be used for the treatment, diagnosis, or prophylaxis of infections in humans and animals. In particular the products and methods are directed against microbial infections caused by pathogenic Gram-positive Staphylococcus aureus, including antibiotic resistant stains. Listeria monocytogenes, and Gram-negative antibiotic resistant Rlebsiella pneumoniae. E. coli, entercocci, and Salmonella typhinutiom bacteria, micro-organisms difficult to treat such as Mycobacterium avium and M. fortutium, fungi such as Candida albicans, Cryptococcus neoformans, and Aspergillus fundatis, viruses, in particular enveloped viruses, and parasites such as Trypanosoma cruzi and Taxoplasma gondil.
Ubiquicidine; treatment; diagnosis; prophylaxis; infection; microbial; pathogenic; Gram-positive bacteria; antimicrobial; Staphylococcus aureus; Listeria monocytogenes; Gram-negative; Klebsiella pneumoniae; E. coli; enterococcus; Salmonella typhinuriom; Mycobacterium avium; M. fortuitum; fungus; Candida albicans; Cryptococcus neoformens; Aspergillus fumigatis; virus; parasite; Trypanosoma cruzi; Taxoplasma gondii.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

This invention describes nover peptiaces which have anti-tumour, as anti-inflammatory, anti-anglogenic and anti-arthritic activity. Such anti-inflammatory, anti-anglogenic and anti-arthritic activity. Such molecules are identified by treating a purified NGR receptor with a test compound and identifying compounds that bind specifically to the NGR receptor. The peptides of the invention are inhibitors of anglogenesis and can be used to produce conjugates for delivering agents to anglogenesis and can be used to produce conjugates for delivering agents to anglogenic vasculature, particularly anticancer drugs or an imaging agent, for diagnosis or prognosis. These conjugates may be directed to non-tumour convounded tissue, e.g. for treatment of macular degeneration, diabetic retinopathy or rheumatoid arthritis. The peptides provide specific retinopathy or rheumatoid arthritis. The peptides provide specific targeting to tumours, especially their supporting vasculature, since the NGR receptor is exposed to the circulation only in anglogenic vasculature. Precise targeting should reduce the systemic toxicity of anticancer drugs in the conjugates. Complete killing of all target cells may not be essential since partial denudation of endothelium may result in an occlusive thrombus, and endothelial cells are unlikely to become resistant to anticancer agents not to lose the targeting receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CGRP; calcitonin-gene-related peptide; rCGRP-alpha; treatment; headache; non-insulin-dependent diabetes mellitus; cardiovascular disease; asthma; skin disease; inflammatory disease; allergic rhinitis; immunoassay; excessive vascular dilation; concomitant reduced tissue blood flow;
                         molecules that home to anglogenic vasculature used as anticancer agents
                                                                                                                                                   This invention describes novel peptides which home to anglogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                morphine tolerance; antibody; diagnostic; neurotransmitter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note= "C-terminal amide"
                                                                                                  Example VI; Page 115; 180pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                              W60390-432 represent peptides recovered from mouse melaanomas. The peptides are tumour homing peptides, and are identified by in vivo panning. The in vivo panning comprisses administering a library of diverse peptides to a subject having a tumour, collecting a sample of the tumour, identifying a peptide that homes to the tumour, collecting a sample of normal tissue corresponding to the tumour, and determining that the peptide that homes to the tumour is not present in the normal tissue. The tumour homing peptides can be linked to a moiety (e.g. doxorubicin), and used to direct the moiety to a tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Tumour homing peptide; tumour; diagnosis; endothelial cell; melanoma; anglogenic vasculature; anti-tumour; anti-inflammatory; anti-anglogenic; anti-arthitic; NGR receptor; inhibitor; anglogenesis; anticancer drug; prognosis; inflammation; regeneration; wounded tissue; targeting; macular degeneration; diabetic retinopathy; rheumatold arthritis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                      The Invention describes peptides derived from calcitonin-gene-related peptide (rGGRP-alpha) (positions 27.37) sequence H-FVPTNVGSEAF-NH2 where (1) 1-3 of the amino acids in the sequence FVPTNVGSE are replaced with K, Y, A, F, P, Hyp, S, L, O, D, H, Acp, Pac, Tic, Hop, Aib, I or G; or (ii) the sequence FVPTNVGS is replaced with NFVPRSKISP, NVAPRSKISP, NVAPTNVGS or ILSSTNVGS and/or (iii) 1-8 of the amino acids in the sequence FVPTNVGSEAF EVPTNVGSE are deleted and (iv) one amino acid in the sequence FVPTNVGSEAF substituted by a protecting group R selected from 3,3-diphenylpropionyl, 2-propylpentanoyl, 3.5-dichlorophenoxyacetyl, 1-adamantylacetyl, 3,5-dibromo-4-hydroxyphenylalanyl,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        4-(4-benzhydryl-1-piperazinyl)-1,5-dloxo-3,3-(tetramethylene)-pentyl or 5,11-dlhydro-6-oxo-6H-dlbenz[b,e]azepin-11-carbonyl. The peptides are useful for treating headache, non-insulin-dependent diabetes mallitus, cardiovascular diseases, skin diseases, inflammatory diseases, alleritus, rinitis, asthma, diseases involving excessive vascular dilation and concomitant reduced tissue blood flow, and morphine tolerance. They are also useful for producing and purifying antibodies, as immunoassay reagents, as diagnostic and analytical tools in neurotransmitter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human leucocyte antigen; HLA class II; antigen epitope; pharmaceutical;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              immune response; chronic viral disease; cancer; autoimmune disease; rheumatoid arthitis; multiple sclerosis; myssthenia gravis; AIDS; allograft rejection; allorgy; lyme disease; hepatitis; prostate cancer; glomerulonephritis; food hypersensitivity; malaria.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                        Derivatives of calcitonin-gene-related peptide fragment - useful as diagnostic reagents and as CGRP antagonists, for treatment of cardiovascular diseases, headaches and asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .

The present invention relates to a new pharmaceutical composition comprising a unit dose form of a peptide, or analogue, comprising an epitope selected from those represented by peptides y 981812*99339 which are derived from various antigens for various human leucocyte antigen class DR molecules, representative of the world wide population. The class DR molecules, representative of the world wide population. The class DR molecules, representative of the world wide population. The class DR molecules, the pharmaceutical can be used to finduce a helper T cell response. The pharmaceutical focuses the immune response towards selected determinants and could therefore be used in cases of chronic viral diseases and cancer. Examples of diseases that can be treated using the peptide containing pharmaceutical include autoimmune controlled containing pharmaceutical include autoimmune gravis), allograft rejection, allergies, layer disease, hepatitis, coperatoricity, and mysashenia cancer, hepatitis, so the peptide epitopes can be used to enhance immune responses and concerning immunogenic mixtures include prostate cancer, hepatitis, so the peptides may also be used to make monoclonal antibodies useful as potential disgnostic cracinoma, laymphoma, and conditions acuminatum. The peptides may also be used to make monoclonal antibodies useful as diagnostic creagents, for example, to determine the susceptibility of an individual will be at substantial risk of developing chonic infection. The selection of appropriate T and B cell epitopes should allow the categories in all will be at a substantial say and the perfect of evicability and allow and are characterized by high sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note= "optionally has a carboxyl, amido, hydrophobic or macromolecular carrier gp. attached"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
compositions containing immunogenic peptide epitopes for various class II DR molecules useful for inducing helper T cell response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    __note= "optionally has an amino, acetyl,

                                                                                                                                                                                                                                                             R64591-623 are peptide derivatives of a 37 mer RF-1 peptide derived from respiratory syncitial virus (RSV) (R6450) which have been truncated at the amino terminus. The peptides are DP-178 like peptides. DP-178 like peptides of a size of 3 of the HIV-1 isolate LAI transmembrane protein gp41. It forms a putative alpha helix at the C-terminal end of the gp41 ectodomain, and complexes with DP-107 (corresponds to amino acids 558-595) which contains a leucine zipper motif. The peptides complex via non-covalent protein-protein interactions. The peptide defivatives were identified by a computer assisted peptide sequence search. The antivital activity of this peptide is not stated in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "optionally has an amino, acetyl, 9-fluorenylmethoxy-carbonyl, hydrophobic or macromolecular carrier gp. attached"

                                                                                                                                                                                                                                                                                                                                                                                    R64591-623 are peptide derivatives of a 37 mer RF-1 peptide derived from respiratory syncitial virus (RSV) (R64590) which have been truncated at the amino terminus. The peptides are DP-1/8 like peptides. DP-1/8 corresponds to amino acids 638 to 673 of the HIV-1 isolate LAI transmembrane protein 941. It forms a putative alpha helix at the C-terminal end of the 9941 ectodomain, and complexes with DP-107 (corresponds to amino acids 558-595) which contains a leucine Zipper motif. The peptides complex via non-covalent protein interactions. The peptide derivatives were identified by a computer assisted peptide sequence search. The specification.
                                                                                                                                                                                                Computer search generated synthetic peptides - are inhibitors of HIV transmission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence of VPI capisid protein residues 141-160 from the aminoterminus, FMDV, Tubingen type 0, subtype 1, strain Kaufbeuren.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antigen; Picornavirus; capsid protein; antibody; detection;

from respiratory syncitial virus (RSV) (R64590) which have been truncated at the amino terminus. The peptides are DP-178 like peptides. DP-178 corresponds to amino acids 638 to 673 of the HIV-13 isolate LAI transmembrane protein gp41. It forms a putative alpha helix at the C-terminal end of the gp41 ectodomain, and complexes with DP-107 (corresponds to amino acids 558-595) which contains a leucine zipper motif. The peptides complex via non-covalent protein-protein interactions. The peptide derivatives were antiviral activity of this peptide is not stated in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   R64591-623 are peptide derivatives of a 37 mer RP-1 peptide derived from respiratory syncitial virus (RSV) (R64590) which have been truncated at the amino terminus. The peptides are DP-178 like

                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to hybrid polypeptides comprising enhancer peptide sequence linked to core polypeptides. The enhancer polypeptides are derived from various retroviral envelope (gp41) protein sequences, especially from HIV-1. HIV-2 and SIV. The enhancer peptides enhance the pharmacokinetic properties such as increasing the half-life of any core polypeptide that they are linked to. The core polypeptides are any polypeptide that may be introduced into a living system and that can function as a pharmacoligically useful peptide for the treatment or prevention of a disease. The core polypeptides are bloactive peptides selected from a growth factor, cytokine, differentiation factor, interleukin, interferon, colony situalating factor, hormone or angiogenic factor. The peptides of the invention can be used for inhibiting viral infection and can be used in anti-viral and anti-fusogenic treatments. Sequences Y88651-Y90055 represent core polypeptide fragments that can be used in the invention. Some sequences among those indicated also comprise
                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                Retrovirus; hybrid polypeptide; enhancer; gp41; envelope protein; HIV-1; HIV-2; SIV; pharmacokinetic; half-life; growth factor; cytokine; viral; anti-fusogenic; differentiation factor; interleukin; interferon; colony stimulating factor; hormone; angiogenic factor.
                                                                                                                                                                                                     Gaps
DP-178 corresponds to amino acids 638 to 673 of the HIV-1
           isolate LAI transmembrane protein gp41. It forms a putative alpha helix at the C-terminal end of the gp41 ectodomain, and complexes with DP-107 (corresponds to amino acids 558-595) which contains a leucine zipper motif. The peptides complex via non-covalent protein interactions. The peptide derivatives were identified by a computer assisted peptide sequence search. The antiviral activity of this peptide is not stated in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A new hybrid polypeptide with enhanced pharmacokinetic properties comprises enhancer sequence -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  from respiratory syncitial virus (RSV) (R64590) which have been truncated at the amino terminus. The peptides are DP-178 like peptides. DP-178 corresponds to amino acids 638 to 673 of the HIV-1 isolate LAI transmembrane protein 9941. If forms a putative alpha helix at the C-terminal end of the 9941 ectodomain, and complexes with DP-107 (corresponds to amino acids 588-595) which contains a leucine zipper motif. The peptides complex via non-covalent protein-protein interactions. The peptide derivatives were identified by a computer assisted peptide sequence search. The specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      R64591-623 are peptide derivatives of a 37 mer RF-1 peptide derived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "optionally has an amino, acetyl,

The cancer may be breast, bladder, prostate, pancreas, ovary, thyroid, cancer may be breast, bladder, prostate, pancreas, ovary, thyroid, colon, stomach, head or neck cancer or a carcinoma. The tumour associated antigens are presentable to the immune system by HLA-A2 molecules and are generally between 8 to 10 amino acids in length. The antino acids located at positions 2 and 9 of the tumour associated antigens are the anchor residues which participate in the binding to MHC class I molecules, more specifically HLA-A2. More tumour associated antigens are described in GENESEO records Y82806-Y82882. Those tumour associated antigens described in GENESEO records Y82806-Y82882. Those tumour associated antigen from Uroplakin is. Uroplakin III and Uroplakin IB. Those described in records Y82830-Y82839 are derived from prostate specific antigen prostate specific membrane antigen (PSAA). Those described in records Y82840-Y82839 are derived from prostate acid phosphotase (PAP). Those described in records Y82840-Y82846 are derived from prostate acid phosphotase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Tumor associated antigen peptides, especially derived from uroplakin, useful as vaccines to prevent or cure cancers including breast, bladder, prostate, pancreas, ovary, thyroid, colon and stomach -
